## **DETAILED ACTION**

### ***Priority***

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1, 2 and 14-23 are rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure, which is not enabling. The condensation reaction of the hydroxymethyl groups is the only polymerization reaction and the substituted or unsubstituted phenyl is excluded note page 20 appears critical or essential to the practice of the invention, but not included in the claim(s) is not enabled by the disclosure. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976).

### ***Double Patenting***

Claims 1-23 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 25-66 of copending Application No. 10/321643 in view of Nakata et al. Although the conflicting claims are not identical, they are not patentably distinct from each other because the electrophotographic photosensitive member has a surface layer with a polymer from a

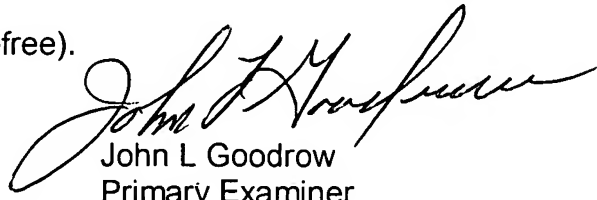

hydroxymethyl containing group and a hydroxyphenyl containing group. Nakata et al teaches a cured phenolic resin as a protective layer with an electroconductive particles such as metal oxide particles note Col. 60 line 30-50. It would be obvious to one of ordinary skill in the art at the time of applicants' invention with a reasonable expectation of success to use the electroconductive particles in the protective layer in which the protective layer has the cured phenolic resin principally obtained by a condensation reaction.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.
